Services

Trade, logistics and warehousing of agricultural produce, Food and feed production and processing.

Today, world food production still suffers substantial losses due to pests during post-harvest storage and transport. An effective, reliable pest control program is needed to contain and reduce damage inflicted by insect pest. Fumigation, stock protection and pest control are highly specialized areas. SGS has invaluable expertise in this field. In addition, our worldwide network enables us to operate in any port or region at short notice.

This service is aimed at agri customers who are mainly involved in the export of agricultural commodities. It comprises:

? Fumigation of cargo

- ? Fumigation of agricultural products: cereals, pulses, cocoa, peanuts, coffee, tobacco, etc.
- ? Treatment of agricultural products against insects and mites
- ? Treatment in bulk, bagged commodities, stacks, silo, warehouses

? Port related fumigation

- ? Fumigation "in transit" (during voyage)
- ? Cockroach destruction in ships' accommodation
- ? Deratisation
- ? Disinfections of empty holds, planes
- ? Denaturation and coloration
- ? During storage: silos, warehouses and tanks
- ? During transport: ships, barges, trains, trucks, containers

? Disinfections and fumigation in industry: food industry, flour mills, breweries, malt houses

? Quarantine treatment of containers, weir timbers and pallets

? Ventilation and gas free measurement

Our operations comply with stringent local and international legislation as well as international quality and safety standards. Our technicians and engineers can advise and assist you on the best available techniques.
