## Services

Inspection and technical control are one of the vital features for ascertaining that the goods inspected will fulfill the intended requirements, and they are the major factors for pursuing the repaid advancement achieved by the great industrial countries in all fields of production and services.

With the strong belief of the International Center for Inspection and Technical Control, the center takes pleasure in programming a series of crash courses for responsible persons and technicians involved in quality control. These courses are meant to develop the participant's knowledge of modern improvements and methods in the field of inspection and control of goods, commodities and equipment, both foreign and locally produced during the process of production with a view to protect the health and well being of the consumer.

These courses have been devised in a way that should cover fields, such as:

- ? Engineering fields.
- ? Agricultural and foodstuff fields
- ? Testing and Analysis
- ? Occupational safety
- ? Management and Computer applications.
- ? Non-Destructive Testing.
- ? Environmental and Pollution Studies.

Duration of each course varies between one and two weeks, as required, in addition to the special training courses which may be applied for by administrations and firms which may want them to be held either in the center or at their own premises, Courses being held at the Center's premises in Alexandria or in Cairo or else in five stars hotels.

## Services

Training language delivered in Arabic and English.

A Certificate is delivered to the successful participant at the end of every course.
